

TASK 3: Prompting for Task Automation

Objective:

Design a clear and consistent prompt to semi-automate a real-world task: transforming unstructured notes into structured JSON output.

Chosen Real-World Task:

Convert messy meeting notes into structured JSON format for reporting and tracking.

Final Designed Automation Prompt:

"You are a data extraction assistant.

Convert the following meeting notes into structured JSON format.

Required JSON structure:

```
{
  "meeting_title": "",
  "date": "",
  "participants": [],
  "key_points": [],
  "decisions_made": [],
  "action_items": [
    {
      "task": "",
      "assigned_to": "",
      "deadline": ""
    }
  ]
}
```

Rules:

- If information is missing, use null.
- Do not add extra commentary.
- Output strictly valid JSON only."

Example 1

Input:

Team Sync Meeting – 12 Feb 2026

Participants: Rahul, Sneha, Arjun

Discussed mobile app redesign and server downtime issues.

Decision: Launch beta version by March 15.

Action: Rahul to fix API bug by Feb 20.

Output:

```
{
  "meeting_title": "Team Sync Meeting",
  "date": "12 Feb 2026",
  "participants": ["Rahul", "Sneha", "Arjun"],
```

```
"key_points": ["Mobile app redesign discussion", "Server downtime issues"],
"decisions_made": ["Launch beta version by March 15"],
"action_items": [
{
"task": "Fix API bug",
"assigned_to": "Rahul",
"deadline": "Feb 20"
}
]
}
```

Example 2

Input:

Marketing Review – 5 March 2026

Attendees: Aisha, Karan

Talked about Instagram campaign performance.

Decision: Increase ad budget by 20%.

Action: Aisha to prepare performance report by March 10.

Output:

```
{
"meeting_title": "Marketing Review",
"date": "5 March 2026",
"participants": ["Aisha", "Karan"],
"key_points": ["Instagram campaign performance discussion"],
"decisions_made": ["Increase ad budget by 20%"],
"action_items": [
{
"task": "Prepare performance report",
"assigned_to": "Aisha",
"deadline": "March 10"
}
]
}
```

Example 3

Input:

Project Planning – April 2

Members: Vikram, Neha, Tanvi

Discussed UI improvements.

No major decisions yet.

Action: Tanvi to submit wireframes next week.

Output:

```
{
"meeting_title": "Project Planning",
"date": "April 2",
"participants": ["Vikram", "Neha", "Tanvi"],
"key_points": ["UI improvements discussion"],
"decisions_made": [],
}
```

```
"action_items": [  
  {  
    "task": "Submit wireframes",  
    "assigned_to": "Tanvi",  
    "deadline": "Next week"  
  }  
]
```

Reflection on Prompt Iteration and Debugging:

Initial attempts without strict JSON instructions resulted in inconsistent formatting and extra explanations.

Adding:

- Explicit JSON schema
- Clear rules (no commentary)
- Missing-value handling
- Consistent field naming

improved reliability across multiple inputs.

This demonstrates that structured prompts with schema definitions significantly enhance task automation consistency and reduce output variability.
